

Organization Trust Pulse Intelligence Report

ABC Company | June 3, 2025

Participants: 30

This report provides leadership with a real-time view of the climate of Trust within the organization.

The Trust Pulse reveals how trust is currently being experienced across the organization, and where leadership attention will have the greatest impact. It makes visible the organizational conditions that determine how effectively strategy is implemented, how decisions are made, and how people work together.

The Trust Pulse assesses observable behaviours across three core systemic lenses which have a vital impact on every organisation. These three lenses, which are interdependent, are:

Processes - A series of related and organised actions or events performed to achieve a specific goal or result. Processes are repeated and standardized to ensure that the desired outcome is consistently achieved.

Communication - The focus is on how people interact and communicate with each other. That is, the transmitting, receiving, and interpreting of information.

Culture - Culture is the climate that created through all the choices that have made in your business ...past, present, and future...and the behaviours that result from those choices. Culture is either consciously shaped or shaped by default.

These three interdependent areas can be summarised as follows:

- Processes - through which trust becomes operationalized not simply cultural.
- Communication - moves trust from belief to practice.
- Culture - measuring the environment that makes trust possible.

How to Read this Report

The Trust Pulse measures the climate of trust within an organization. It does not assess personalities or performance. It reveals the organizational conditions being created through everyday leadership choices, systems, and behaviours.

This report is designed to support leadership teams to:

- understand the trust environment in which results are being produced
- identify where organizational design is enabling or constraining performance
- align leadership action around the conditions required for the next stage of growth

The Trust Pulse is most powerful when used as a collective leadership instrument, not an evaluative tool.

Trust as an Organizational Asset

Trust is an operating condition where psychological safety, empowerment, collaboration, and trust are not peripheral concerns. They are strategic assets. They determine whether innovation takes root or stalls, teams thrive or burn out, transformation efforts succeed or fragment.

When these dynamics remain invisible, leaders are left operating within parallel mandates, each acting with good intent but without a shared view of the human system that connects their work.

The climate of trust within an organization shapes

- the speed and quality of decisions
- how effectively people collaborate across boundaries
- the organization's ability to adapt, innovate, and make an impact
- whether strategy translates into coordinated action

Organizations operate in one of three broad trust environments:

Trust Dividend

Where trust is actively generating value. Energy flows into innovation, collaboration, ownership, and continuous improvement.

Stability Zone

Where trust is sufficient to maintain performance but not yet enabling full organizational potential.

Trust Tax

Where hidden friction, misalignment, and disengagement increase the cost of operations and limits results.

The Trust Pulse reveals which environment the organization is currently operating within, and what that means for leadership focus.

Trust Pulse Diagram

The Trust Pulse diagram below shows the three environments in which Trust is experienced in a business, as a Trust Dividend, Stability, or Trust Tax. The results of the assessment of the three interdependent areas, processes, communication, and culture places the organization and its departments at one of these three levels.

Organization Trust Profile

Your Overall Trust Operating Environment

Trust Dividend - 84%

ABC Company is operating in Trust Dividend on the Trust Pulse.

This indicates an organization environment where creativity, open-mindedness, and experimentation are at the heart of the organization's operations. It's a place where everyone is encouraged to think differently, try new things, and contribute to a continuous cycle of improvement and growth.

Trust System Strengths

Culture | Communication | Processes

Trust is not created by a single initiative. It is generated through the interaction of culture, communication, and processes.

In the Trust Pulse, these three interdependent lenses represent how trust is:

- shaped (Culture)
- expressed (Communication)
- embedded (Processes)

Together, they show how trust is currently being designed into the organization.

Overall trust condition

ABC Company is operating in a Trust Dividend environment.

Primary organizational strength

Culture is the highest performing dimension.

Primary organizational constraint

Processes is the lowest scoring dimension.

Critical Perception Gap

The statement with the greatest variance in responses highlights a significant divergence in perceptions among respondents. This variation suggests inconsistency in understanding, experience, or expectations related to this area.

No significant divergence in perceptions was identified.

Additional barriers to building trust

These are the three statements with the lowest scores.

1. Processes - Our technology and processes work well together to support new ideas.
2. Communication - Teams share and collaborate freely across the company.
3. Processes - Daily activities between different roles are well coordinated.

They can be used to assist you in developing plans for addressing the insights provided in this Trust Pulse Report.

Trust Pulse Category Results

Generally, the way processes, communication, and culture are being experienced in your organization is as follows

Culture - Legacy

There is a sense of fulfilment at having achieved global impact. The culture of the organisation shows it will leave a lasting legacy.

88%

Communication - Aligned effortless communication

The flow of information is clear as all decisions are guided by the principles of the business. The communication is effortless and inspires creativity, collaboration, and innovation.

83%

Processes - Integrated processes

Processes are leveraged by effective collaboration and are integrated amongst all stakeholders. This helps to accelerate growth.

79%

Development Path

Planning for improvement should initially focus on **Processes** and include actions relating to the three lowest scoring statements. If any statements are classified in the Critical Perception Gap, they should be examined closely as they highlight areas where perceptions diverge.

Trust Distribution and Department Signals

Department-level Trust Profiles reveal how consistently trust is being experienced across the organization.

They highlight:

- where conditions are coherent
- where experiences diverge
- where structural or leadership attention may be required

Research and Development

Culture

Communication

Processes

Finance

Culture

Communication

Processes

Department results help leadership identify whether trust is being generated systemically or locally, and where organizational alignment can be strengthened.

Using This Report as a Leadership Team

This report is designed to support leadership stewardship of the organization's trust environment.

Leadership teams typically use Trust Pulse to:

- frame strategic and operational priorities
- guide leadership alignment conversations
- inform organizational design initiatives
- track trust conditions over time

To use this report effectively:

- Review results collectively, not functionally
- Focus on organizational conditions, not individual performance
- Identify one or two strategic trust levers
- Integrate trust insights into planning and transformation work
- Establish a re-measurement cadence to monitor progress
